

Bl CONCL

a web server for receiving the television program listings with embedded real-time data from the computer system and for providing the television program listings with embedded real-time data corresponding to events being televised live to the multimedia system over the Internet communications link when the user accesses the television program listings with embedded real-time data using the multimedia system.

36. (Amended) A method for providing television program listings with embedded real-time data to a user at a multimedia system over an Internet communications link using an Internet television program guide system having a computer system and a web server, the method comprising the steps of:

B7D CONCL

providing television program listings with embedded real-time data with the computer system, said real-time data corresponding to events being televised live;

receiving the television program listings with embedded real-time data from the computer system with the web server; and

providing the television program listings with embedded real-time data corresponding to events being televised live to the multimedia system over the Internet communications link with the web server, so that the user can access the television program listings with embedded real-time data.

REMARKS

I. Introduction

A two-month extension of time to reply to the September 30, 1999 Office Action is hereby respectfully requested. A check in the amount of \$380.00 is enclosed in payment of the two-month extension of time fee.
